Team Size: 4	
Key Skills: Java XML Gradle Debugging Android Studio	
This project aims in digitalizing our alma mater premises. We usually get e-mails or text-based notices or major important pieces of information regarding events that happen within a college campus. In the age of digitalization where 99% of students are now having smartphones, laptops, or computers, it would be beneficial if we switch towards App based procedures in our alma mater. This project consists of two apps, one would be the Administrator App and another one would be the End-user App. Both apps would refer to the same database. The staff and faculties would preferably use the Administrator app to promulgate information. As we know that 90% of the internet used nowadays is App-based internet, hence, to make the institutions follow this trend, this app is under development. I am scaling myself with skills like Java programming, Code debugging, UI-UX design, XML, and database management. In a nutshell, this app would be beneficial not just for my upskilling but for the institution as well.
